

Teacher's Guide to TerraNova NEXT

The Teacher's Guide to TerraNova NEXT was created to give classroom teachers a clear understanding of what the TerraNova NEXT assessment is, how it was developed and how test results may be used to facilitate teaching and learning. Achievement tests can serve a valuable purpose if the testing information is used appropriately to support instruction in the classroom. Succeeding in that purpose begins with an understanding of what the test measures and how it relates to what is being taught.

The information in the Teacher's Guide will help teachers prepare for administering tests and planning individual and group instructional programs based on test results. It is also a valuable source for teachers and administrators who will be discussing their testing programs with those who are not acquainted with the meaning and purposes of standardized tests. The Teacher's Guide focuses on the total evaluation process and includes a broad range of topics from suggestions on how to prepare for testing to guidelines for communicating tests results to students and parents/guardians.

Teacher's Guide to TerraNova NEXT includes:

- Introduction to TerraNova NEXT (Test Configurations)
- Test Development Procedures
- Detailed Content Descriptions
- Item Level Blueprints (Item Classification Skills Details)
- Critical Thinking Frameworks (Thinking Skills and Depth of Knowledge)
- Performance Level Descriptors
- Understanding and Using Test Results
- Report Guides
- Illustrative Items
